

VISQUEEN POLYCROP PRO1800

Advanced Pro Technology for the Professional

Visqueen PolycropPro1800 is a silage stretchfilm developed for more efficient wrapping in the field. With its 1800m film length, Visqueen PolycropPro1800 provides farmers and contractors up to 20% more bales per reel, 20% savings on time in reel changes and transport costs. It also reduces the number of reels required.

Visqueen PolycropPro1800 is supplied in innovative sleeve packaging, which protects the reel from dirt and dust before use. This packaging also provides reel edge protection and added convenience for users. The sleeves are made from the same base material as balewrap, meaning that they can be recycled alongside the film after use.
