

VISQUEEN

High Strength Silage Sheets

- **A significantly stronger silage sheet**
- **Excellent tear resistance**
- **High resistance to weathering**
- **Easy to apply and longer lasting**

Robust Impact Features

Advances in polymer technologies have enabled the development of a new high strength silage sheet: **Visqueen.**

Manufactured using the finest raw materials this durable silage sheet is strong enough to withstand the rigours of the tough farm working environment thanks to its exceptional puncture resistance. Visqueen's robust impact features also help to prevent tears and splits occurring during the clamp sheeting process.

Visqueen's increased resistance to weathering protects the silage crop from the harshest of weather conditions whilst UV inhibitors provide essential protection from sunlight.

In addition to black, Visqueen is available as a two colour sheet with white on the upper side to reflect light and reduce heat absorption, an important feature in warmer climates or in maize silage clamps.
