

2in1 Silage Sheet

Two great products, one simple application.

Visqueen Agri-S Synergy combines Visqueen's high strength silage sheets and Clingseal vacuum sheets into one smart sheeting solution. The single application makes sheeting the clamp up twice as fast; simply unroll the sheet and open the folds.

The flexible nature of the Clingseal vacuum sheet contours to the face of the clamp, eliminating air pockets and significantly reduces top and shoulder losses from aerobic spoilage. The lightweight, yet tough Agri-S top silage sheet has a high resistance to weathering and provides exceptional puncture resistance.

The single film solution has less packaging waste, compared to separate sheeting product options. Both films are manufactured from PE material and can be recycled together.

Two films on one roll makes the coverage of silage fast and efficient.

After being unrolled on to the silage, simply unfold the two films together in one single step.

Instead of positioning two separate films, Visqueen[®] Agri-Synergy is already perfectly placed from the start.

The perfect positioning of the two films ensures a constant coverage and a better result for your silage.
